## PROFESSIONAL SUMMARY

Full-stack Software Engineer with 3+ years designing and delivering low-latency, high-throughput, fault-tolerant distributed systems, microservices, and REST/GraphQL APIs across cloud platforms. Skilled in Java, Spring Boot, JavaScript, React/Angular, Python, NoSQL and relational databases, automated testing, and CI/CD, with full SDLC ownership from design through production support. Built API and automation solutions that improved integration speed and operational consistency, with a focus on code quality, testability, and scalable infrastructure.

## WORK EXPERIENCE

**Sagacious Monks |** Software Engineer | San Jose , California Feb 2025 - Present

- Own end-to-end delivery across five SDLC stages for low-latency, high-throughput, fault-tolerant distributed systems and full-stack services built with Java, Spring Boot, React, Angular, and Node.js, serving 50K+ daily requests on AWS while driving design, implementation, testing, deployment, and production support.
- Design and maintain production REST and GraphQL APIs and Spring Boot microservices with clear contracts, data models, validation, authentication, logging, and exception handling, cutting partner integration onboarding time by 30%.
- Build Kafka-based event-driven pipelines and Python automation for API validation and data processing, handling 2M+ messages daily with retry and dead-letter handling for reliable, scalable workflows.
- Partner with product, QA, DevOps, security, and architecture teams in Agile sprints using JIRA and Confluence to design features, evaluate trade-offs, and deliver roadmap items 20% faster.
- Improve code quality, testability, and automation through JUnit, Postman, and SonarQube quality gates, Git code reviews, and CI/CD pipelines on Jenkins, Docker, and Kubernetes, cutting deployment time by 35% and establishing distributed systems architecture standards and best practices.
- Diagnose production issues through monitoring, log analysis, API debugging, and root cause analysis, implementing performance and scalability improvements that sustain 90% system uptime as services scale.

**EPAM Systems |** Full Stack Developer | Hyderabad , Telagana Jun 2022 - Jun 2024

- Developed data-intensive customer-facing applications using React, Angular, TypeScript, and Java/Spring Boot, exposing REST and GraphQL APIs across cloud-based architectures on AWS, Azure, and GCP.
- Built microservices for customer onboarding, transaction validation, and account servicing with Spring framework components, data modeling, authentication, and exception handling, supporting 3 core business workflows.
- Designed NoSQL (MongoDB) and relational (PostgreSQL) data layers with Redis caching, reducing API response latency by 40% under high-throughput, distributed workloads.
- Automated monitoring, log analysis, and API validation with Python, cutting manual support effort by 50% and improving troubleshooting consistency across releases.
- Built CI/CD pipelines on Jenkins and Docker with JUnit and Postman automated testing and Git code reviews, shortening release cycles by 30% and increasing deployment stability.
- Partnered with development, QA, infrastructure, and operations teams to resolve production issues and improve service reliability, reducing incident resolution time by 40% and sustaining 90% system uptime.

## PROJECTS

**ResolveAI - AI-Powered Incident & Ticket Management Platform** Jun 2026 - Present

- Full-Stack / AI Engineering Project
- Architected a four-layer microservices platform (React/TypeScript UI, Spring Boot services, Python FastAPI, PostgreSQL, Docker) with REST API development for end-to-end ticket and incident workflows, designed for distributed systems scalability.
- Designed ticket and AI-analysis APIs with data models, validation, exception handling, and health monitoring, adding NoSQL data access for high-throughput workloads and JUnit/Postman end-to-end testing.
- Implemented LangGraph/RAG workflows with two model-provider paths, OpenAI and Ollama, using structured outputs, semantic retrieval, guardrails, and deterministic fallback behavior for resilient service operation.

## SKILLS

**CORE SKILLS:** Languages & Frameworks: Java, Python, JavaScript, TypeScript, Spring Boot, Spring Framework, RxJava, Node.js, React, Angular, FastAPI, APIs & Distributed Systems: REST APIs, GraphQL, API Development, Microservices, Microservices Architecture, Distributed Systems, Low-Latency Distributed Systems, High-Throughput Systems, Fault-Tolerant Systems, Kafka, Messaging Technologies, Data: PostgreSQL, MongoDB, Redis, SQL/NoSQL, Data Modeling, Data Processing Pipelines, Cloud & DevOps: AWS, Azure, GCP, Docker, Kubernetes, Jenkins, CI/CD, Git/GitHub, Cloud-Based Architectures, Quality & Practices: JUnit, Postman, Automated Testing, Code Reviews, Monitoring, Reliability, Scalability, Agile/Scrum, SDLC Automation, Full-Stack Development

## EDUCATION

**University of North Carolina at Charlotte** Aug 2024 - Dec 2025
M.S, *Computer Science* GPA: 4.0
